How Xpaper PDF works

Xpaper PDF is a personal productivity tool for business individuals as well as a business process enhancement system for small and large organizations.

If you know how to print a document and write with a pen, you already know how to use Xpaper PDF.

- 1 Print**
You simply print from any application using the Xpaper PDF printer driver. A unique pattern of microdots is added to the document as it is printed, and an image of the document is automatically stored on your computer for later reference.
- 2 Write**
Next, you write with a digital pen as you normally would. Xpaper PDF's special pattern of dots enables the digital pen to automatically sense its location and record your handwriting in its memory.
- 3 PDF**
When the pen is docked in its cradle, the recorded ink is downloaded and matched with the image of the original document – instantly creating an exact copy of the handwritten document in PDF format, just as if you had scanned or photocopied it!

Automatic Action

Once ink is applied, the resulting PDF is automatically sent, stored, managed, or used by any software application based on custom actions that are designated at print time - including assisted data entry with PaperView, or further handwriting processing using partner software.

Compatibility

The system works with documents printed from any Windows application. This includes desktop PC applications as well as Internet-enabled applications that run in browsers. Digital copies are created in the common PDF format, so they are easily used with almost any information system.

Data Sheet (continued)

Multi-user environments

Xpaper PDF is easily configured for networked environments. Documents can be printed with one computer, and then written upon with multiple pens which are docked at other computers. Handwriting will be automatically updated on the digital copies so they always match the physical paper.

You can even write on documents months after they were originally used. The new ink will be automatically added to the digital copies.

Pre-printed forms

Do you use a high volume of forms? There's no need to print them all on a laser printer. Just send the layout, and we will print them for you. All you then need to do is distribute them for use.

Customization

Want to add digital paper functionality to your software? Or to automatically export Xpaper documents into another software application or information system? Or even have us create a private branded version for your company? We have flexible partner opportunities for almost any business situation. Email us at partners@talario.com.

System Requirements

A digital pen is required to use Xpaper PDF. The following digital pens work with Xpaper PDF:

- Destiny/Logitech commercial io2 pen (USB)
- Destiny/Logitech Bluetooth io2 pen (USB/Bluetooth)
- Anoto/Maxell DP201 pen (USB/Bluetooth)

General

Xpaper works with most 600 dpi or higher color laser printers (PostScript driver required). OKI provides a line of qualified printers that ensure XPaper PDF print-outs meet the highest quality standards. Please contact Talario at 1.605.692.9877 for more information.

Xpaper works seamlessly with any Windows® software (including Microsoft® Office applications, Adobe® Acrobat®, ACT!, and Quickbooks®)

Xpaper works seamlessly with any Internet application (including ERP and CRM applications like Oracle, SAP, Siebel, NetSuite, and Salesforce.com)

XPaper includes PaperView, our innovative new data entry tool that can be used independently or in conjunction with XPaper PDF.

IBM® compatible PC
Windows® 2000 or Windows® XP (Home or Pro) *compatible with all pens
Windows® Vista *not compatible with Destiny/Logitech commercial io2 pen-USB version.
Pentium® III - 700MHz (1 GHz or higher recommended)
512 MB of RAM (1 GB recommended)
Available USB port
Screen resolution minimum of 1024x768 and 256 colors
Approximately 200 MB of free hard drive space.
