

STREAMING EVALUATION KIT

The Streaming Evaluation Kit gives customers the opportunity to evaluate the functionality of streaming Anoto pens. The kit contains 5 streaming pens, some paper with the Anoto pattern and software for Microsoft Windows. This combination lets the user try out the pen in action and get a feel for the functionality when the pen is used on paper and streams data in real-time to an application on the PC.

OVERVIEW

DETAILS

ADP-301 B Pen

The Anoto Digital Pen ADP-301 B is a streaming pen built to communicate with a host via the standardized Bluetooth HID during use. This means that the pen does not contain any memory for strokes except for a small buffer used before the Bluetooth communication is established.

Streaming Paper

The evaluation kit includes several printed pages of Anoto pattern. Each page is printed with a unique part of the pattern allowing applications to separate pen strokes written on different pages.

The kit also includes an EPS file for each page so that users can print more pattern if the included pages are used up.

Streaming Pen Connectivity Driver

The Streaming Pen Connectivity Driver, SPCD, is a software library that gives application developers easy access to real-time streaming data from Anoto pens, enabling development of real-time interactive applications for digital pens.

The SPCD package includes a streamer test application that shows the input from streaming pens in a graphical user interface. The application shows all events that is received from the pen via the SPCD and also renders an image of the pen strokes.

PRODUCT DETAILS

Package Contents

- 5 ADP-301 B pens
- 20 printed pages of streaming pattern
- 20 pages of pattern as EPS files
- Streaming Pen Connectivity Driver software including
 - Programmer's Guide
 - API documentation
 - Streamer Test application
- A Getting Started guide.

Platform support

- Windows XP SP2 or later
- Windows Vista 32 bit
- Windows Vista 64 bit

Supported Bluetooth stacks

- Microsoft
- Widcomm / Broadcom
- Bluesoleil
- Toshiba
