

## "Individual Medical Treatment by IT"

According to MHLW(Ministry of health, labor and welfare)'s statistics in 2005, only 7 percent of domestic hospitals are using electronic medical record system.

OMS is going to take the lead in the "handwritten electronic medical record" in the medical areas which is IT-undeveloped area.

"Data entry by a keyboard and a mouse distracts the doctor from examining patients.", says Ohnishi-san/President.

By using Dr. Pen Lite, the doctor can communicate well with patients without changing legacy workflow, but simultaneously handwritten data can be digitally stored.

OMS launched Dr. Pen Lite in December 2006.

Successively Yamada Denki which is the industry leader of home appliance retailer has also started to sell Dr. Pen Lite from July 2007.

Thanks to Dr. Pen Lite, OMS went into the black as of March 2007, they estimate revenue and profits to furthermore increase as of March 2008.

Originally OMS has been founded for the purpose of genetic research and to provide medicines fitting for each patient individually.

OMS aims to increase precise genetic data to be provided to pharmaceutical companies.

"To make individual medical treatment spread, the IT-infrastructure has to be ready in the medical fields.", says Ohnishi-san.

Dr. Pen Lite becomes a part of that.
