

Bluelinea integrates ReadSoft technology to accelerate the automated processing of the collection of handwritten data in the sector of health

PARIS, March 12 /PRNewswire/ -- According to an agreement of partnership, Bluelinea comes to integrate ReadSoft technology into its BluePen solution of collection of handwritten information by numerical pen. The complementarity of the two offers will make it possible Bluelinea to propose a solution of processing automated of the forms which combines ergonomics, productivity and reliability. Used mainly in the field of health, the solution interests already of other sectors.

Bluelinea, creator of innovating ergonomic solutions intended to facilitate, to the daily newspaper, the life of the users of data processing, in particular of the actors of health (hospital, residence of the patients or within the framework of clinical search), comes to sign an agreement of partnership with ReadSoft, leader in Europe of the automated processing of the documents. ReadSoft technology from now on is encapsulated in the solution BluePen 2.0 of Bluelinea and makes it possible this last to pass an important industrial course.

We chose the ReadSoft platform, to replace a preceding technology, for its capacity to treat very important volume tries while offering a higher rate of recognition of the data, explains Laurent Levasseur, Directeur General of Bluelinea.

Based on a Swedish technology (Anoto), the numerical pen BluePen makes it possible to collect handwritten data on pre-printed forms and to quickly transmit them by telephone or Internet on a protected server. The handwritten data transmitted by the pen are then recognized by ReadSoft which will generate a numerical document identical to the paper document source. ReadSoft then will check the data according to rules trade laid down as a preliminary; only the forms not-in conformity will be the subject of a checking. For example, within the framework of the hospital, a regulation of drugs filled with the bedside of the patient will not be transmitted to pharmacy if the data of body mass of this one is not indicated. Once validated, the data are converted with format XML, CSV or pdf and can be very easily integrated into an information system target (ERP or SIH) or stored in a system of electronic management of documents (GED).

Applications in the medical field many experts adapted this wandering technology, particularly adapted to their needs, in particular in the field of clinical search or for the Collected Act.

First solutions integrating ReadSoft technology are in the course of deployment. Thus, the National Observatory of Dermatology equips nearly 200 dermatologists to BluePen. At the time of next clinical observation campaigns, the experts will receive forms about which they will inform the information received from voluntary patients. Once his supplemented forms, the dermatologist will not have any more that to give the pen on its base (a base USB connected to a PC) and the anonymized data are thus automatically sent on a server, are consolidated, recognized and integrated in an application of statistical processing.

Assets of the solution

- An ergonomic tool, easy to use (no training is necessary)
- A treatment shortened (more double data entry) and a checking facilitated thanks to the access to the images of documents
- A reduction of the costs and times of acquisition of the data
- An increase in the quality of the data (thanks to a strong rate of recognition)
- A traceability and a security of the data immediately integrated in an information system, by encrypted connection.

Worms of other sectors the solution suggested by Bluelinea interests right now of other sectors, in particular the information providers to wandering vocation: service and maintenance firms after sale, services with the person, home medical care, etc.

This new agreement of partnership confirms our strategy of development of our network of partner. It also shows the interest of the market for innovating and verticalized solutions where ReadSoft brings an offer adapted to strong added value, declare Christophe Rebecchi, Director General of ReadSoft France.

In connection with ReadSoft

ReadSoft is the software publisher leader on the market of the Automation of the Documents. The vision of ReadSoft is to release the companies of the manual processing of the documents. Side with Stockholm Stock Exchange since 1999, ReadSoft counts more than 5.600 customers and has subsidiary companies in 15 country. Created in 1997, the French subsidiary company counts three hundred customers

In connection with Bluelinea

Bluelinea deploys original processes intended to facilitate, with the daily newspaper, the life of the users of data processing. To make user-friendly the use of communication and information technologies by adapting them to the uses, while imposing safety requirements among most strict, is the principal objective of the company. Thus Bluelinea developed and continuous to develop innovating and really ergonomic solutions meeting the needs for all: BlueLoc, BluePen and BlueTag.
